Rock Fall®
INDUSTRY DEFINING SAFETY FOOTWEAR

Our Better Materials Framework guides how we source, recycle, and innovate to reduce impact.

"BETTER MATERIALS" Framework

Our Commitment to Materials with Reduced Environmental Impact

Innovating with purpose

Choosing better materials for a better tomorrow

At Rock Fall, we are continuously working to reduce the environmental footprint of our products. A key part of this effort is our focus on selecting materials that we have identified as having a better environmental performance compared to conventional alternatives.

To ensure clear and transparent communication about our efforts, we have established the BETTER MATERIALS Framework. This framework identifies and highlights the materials that meet our standards for reduced environmental impact across both footwear and packaging.

In footwear, we use Leather Working Group (LWG) rated leather, Global Recycled Standard (GRS) certified recycled materials, and bio-based content to promote responsible sourcing, minimise waste, and reduce carbon emissions. For packaging, we prioritise FSC certified recycled raw materials, soy-based inks, and other sustainable solutions that lower environmental impact while maintaining product quality. Together, these initiatives reflect our commitment to better materials and more sustainable practices throughout our products.

Herd - RF205
Sizes: UK 3-13 (INC 6.5 and 10.5)
